

Memory Interface

Function

Convert every address to the true address in the memory.

Inputs

- SP[7:0]
- Instruction[7:0]
- interrupt[7:0]
- data[7:0]
- sel[1:0]
- push (if push is high the SP offset is 0)
- pop (if pop is high the SP offset is + 1)

Outputs

- address[7:0]

Memory

Function

Memory to store all data and instructions. The first group (starting from 0 to 255) is ISR, then the instructions, then the data, then the stack.

Inputs

- rst
- wr_en
- address[7:0]
- wr_data[7:0]

Outputs

- rd_data[7:0]
